KEYMACRO.com is a web-based software for fast and easy creation of keyboard macros in any application. You can create even multiple macros, with some ready-made standard actions for all major programs (e.g. MS Office, Adobe CS, and many others) or create your own. The software is quite easy to use: • Enter the keystroke(s) that you want to create the macro (or many of them) in the settings and then enter the description in the right field. • Double-click on a keystroke to save the macro and you can name it. When you saved the macro, it is inserted into the appropriate place in the keystroke field. • Double-click again to create the macro! • Macros can be either exported to the clipboard or set as the hotkeys of the program they are created for. • You can set the sensitivity of the keystrokes: the more you click on the key, the faster it will be executed. All the macros are saved in.csv format for easy retrieval. You can convert it to keymap files for use with other programs by exporting it to.xml format. KeyMACRO is a web-based software for fast and easy creation of keyboard macros in any application.
